CalLite 2.00 includes the following updates:
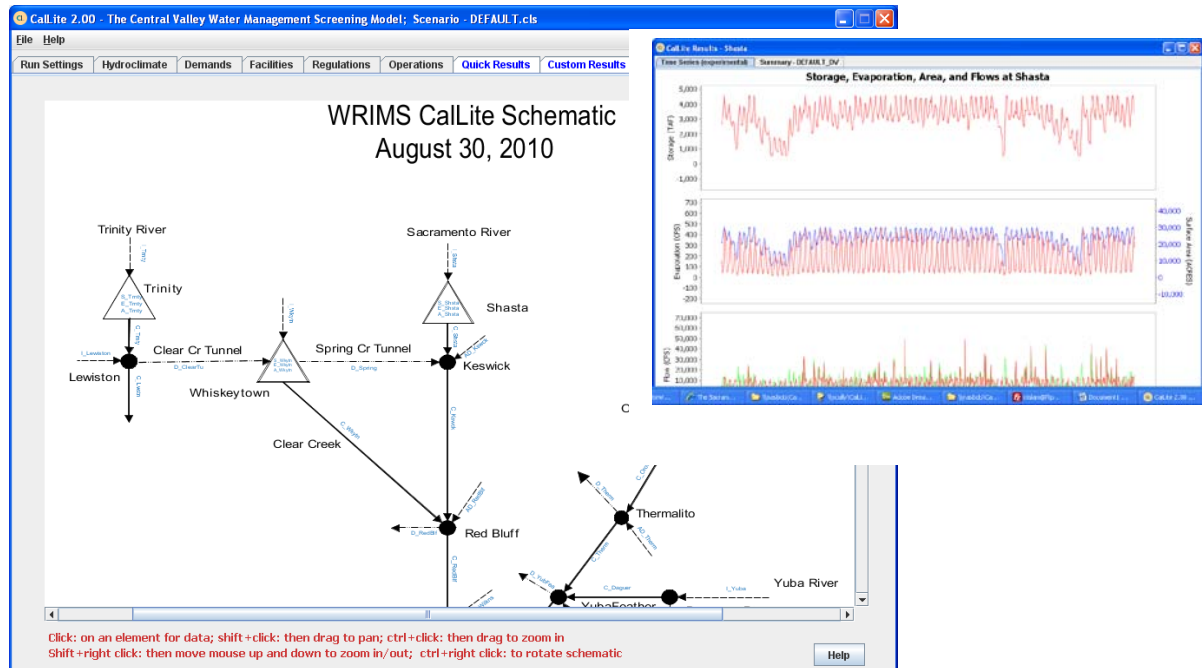

(1) Added functional Map view to extract time series for each arc and node on the schematic on "Mapview" dashboard.

(2) Added WRESL code to copy necessary State Variable time series to DV file for extracting data on the schematic.

(3) Updated user and reference manuals.

(4) We are in the process of updating metadata for "WebMap". This update will continue as we get more information.

(5) Fixed minor issues: Plot Exceedance chart appropriately (reversed X axis: start 100% to 0%), display summary table differences correctly, convert units correctly, separate start date on Run setting dashboard from quick results dashboard, update template files, and add some more error handling codes.
